

# Exploring the value of technology in education

51% of schools in the UK have made technology a priority, but 22% do not have a clear IT strategy.

*Promethean, 2022*

94% of teachers see the benefits of cloud communications as a tool to support remote teaching and learning.

*UK Department for Education, 2021*

"Digital technology, and the data and infrastructure that underpins it, is changing the way we live and work and learn... We need to build on what we learnt in the pandemic to embed and spread new and better ways of doing things for the benefit of all."

Nadhim Sawahi  
UK Education Secretary  
March 2022

The UK Department for Education polled teaching and school administrators from across the UK on their opinions regarding EdTech. The percentage of teachers who agreed with the following statements:

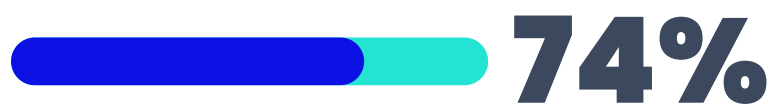

**Student attainment**  
is improved by access to technology

**Technology saves time**  
on parental engagement

**Teacher workload**  
can be reduced by technology

Evidence from the 2021 DfE EdTech Survey suggests that many schools have successfully implemented and begun using technology to support teaching and day-to-day management, saving them time, reducing teacher workload, and contributing to improved pupil attainment.

In particular, schools have relied heavily on EdTech to deliver remote education and positively, the majority believed that they could effectively support pupils to learn remotely. Crucially, the majority of schools intend to continue investing in EdTech solutions in the future.
